Practice Midterm Exam II

Math 362
2/25/10

Name: ______________________________

Read all of the following information before starting the exam:

- READ EACH OF THE PROBLEMS OF THE EXAM CAREFULLY!
- Show all work, clearly and in order, if you want to get full credit. I reserve the right to take off points if I cannot see how you arrived at your answer (even if your final answer is correct).
- A single 8 1/2 $\times$ 11 sheet of notes (double sided) is allowed. Calculators are permitted.
- Copies of normal, t-distribution and χ^2 tables are at the back
- Circle or otherwise indicate your final answers.
- Please keep your written answers clear, concise and to the point.
- This test has . problems and is worth 100 points. It is your responsibility to make sure that you have all of the pages!
- Turn off cellphones, etc.
- READ EACH OF THE PROBLEMS OF THE EXAM CAREFULLY!
- Good luck!

$\sum$	

1. (*25 points*) We are able to generate a random variable U which is uniform $(0,1)$ and wish to use it to generate random variables with other distributions.

a. (*10 pts*) Find a transformation to perform to U in order to find X with pdf

$$f_X(x) = \frac{1}{\pi(1+x^2)}$$

Hint: $\int \frac{1}{1+x^2} dx = \arctan(x)$.

b. (*15 pts*) We repeatedly generate Y with an expo(1) distribution, $f_Y(y) = e^{-y}$ for $0 < y < \infty$. We take $X = Y$ the first time $U \leq f_Y(Y)$. Find an expression for the CDF of X as the ratio of two (double) integrals.

Note: You need not identify the distribution of X, or compute the integrals. Just write down the integrals.

2. (*25 points*) $X_1, \ldots, X_n$ are a sample from a $\Gamma(2, \theta)$ distribution.

a. (*15 pts*) Find the mle $\hat{\theta}$ of θ.

b. (*15 pts*) Find the mle for $\mathrm{Var}(X_i)$.

3. (*20 points*) $X_1, \ldots, X_n$ are drawn from the geometric distribution with parameter θ. That is

$$p(X_i = x) = (1-\theta)^{x-1}\theta, \qquad x = 1, 2, \ldots.$$

Recall, this is a discrete distribution, $\mathbb{E}[\mathrm{X}] = \frac{1}{\theta}$, and variance $\mathrm{Var}(X) = \frac{1-\theta}{\theta^2}$.

a. (*15 pts*) Find the Fisher information $I(\theta)$.

4. (*30 points*) $X_1, \ldots, X_n$ are a random sample from a distribution with pmf $p(x;\theta) = \theta^x(1-\theta)^{1-x}$, x = 0,1. That is, X_i are $0, 1$ random variables, and are 1 with probability θ. We wish to test $H_0 : \theta = 1/2$ versus $H_1 : \theta \neq 1/2$.

a. (*15 pts*) Find $-2\log(\Lambda)$.

b. (*15 pts*) Determine the Wald-type test. (In other words, find χ^2_W)

Table III
Normal Distribution

The following table presents the standard normal distribution. The probabilities tabled are

$$P(X \le x) = \Phi(x) = \int_{-\infty}^{x} \frac{1}{\sqrt{2\pi}} e^{-w^2/2}\, dw.$$

Note that only the probabilities for $x \ge 0$ are tabled. To obtain the probabilities for $x < 0$, use the identity $\Phi(-x) = 1 - \Phi(x)$.

Table IV
t-Distribution

The following table presents selected quantiles of the t-distribution; i.e, the values x such that

$$P(X \leq x) = \int_{-\infty}^{x} \frac{\Gamma[(r+1)/2]}{\sqrt{\pi r}\Gamma(r/2)(1+w^2/r)^{(r+1)/2}}\,dw$$

for selected degrees of freedom r. The last row gives the standard normal quantiles.

	$P(X \leq x)$
